

B.E.G.

DACO® PRO

Intelligent Lighting Control for
Flexible Space Concepts

Multimaster DALI Application Controller

- For lighting control across multiple rooms
- Multiple control loops can be implemented using a single DALI line
- Flexible partition control (e.g. sports halls)
- Expandable with BMS sensors and DALI push-button modules

DACO® PRO

The new B.E.G. multicast product family

DACO® PRO is our new multicast product family and expands our compact sensor portfolio.

The new sensor can control multiple loops, enabling room-spanning regulation via additional BMS sensors – all using just a single DALI line.

This allows, for example, lighting in divided rooms to be controlled independently when a partition wall is closed. When the partition is opened, one control loop follows the other, ensuring that both areas respond together in a synchronized manner.

PD2N-M-DACO-PRO DALI-2

Area covered during tangential movement:
78 m² / 2.5 m installation height

93351

PD4N-M-DACO-PRO DALI-2

Area covered during tangential movement:
450 m² / 2.5 m installation height

93353

Additional Features of DACO® PRO:

- Multiple addressable control loops
- Multicast connection of BMS sensors
- Fast, intuitive parameterization via app
- Can be updated via Bluetooth
- Orientation light
- Human Centric Lighting (HCL)
- Easy lamp replacement
- 4 push-button inputs (DALI buttons & relay)
- Fast addressing via smart infrared device
