Binary Input/Output Device
(4-Channel), KNX Secure-
compatible

93412

Versatile Push-Button Interface for your Building Automation System – now with **KNX Secure!**

Designed to meet the highest standards in modern building control, our **binary input and output device** is a powerful and future-proof solution.

Thanks to its compact design, the device fits perfectly into **60 mm flush-mount boxes** and is fully **KNX Secure**-compatible. This ensures maximum data security in your smart home or building automation system, and it is also compatible with standard switch lines.

With four individually configurable channels, you benefit from maximum flexibility: Each channel can be used either as an input for potential-free pushbutton or switch contacts or as a binary output for controlling indicator lights.

The **user-friendly ETS interface** enables fast, convenient, and precise integration into existing KNX systems.

Take advantage of a wide range of features such as:

- | | |
|------------------|--------------------|
| ■ Switching | ■ Forced operation |
| ■ Percentage | ■ Sequencer |
| ■ HVAC-Mode | ■ Dimming |
| ■ Blinds control | ■ Scene |
| ■ Edge function | ■ Counter |

The product database is conveniently available for download on the **B.E.G. website** or directly from the ETS online catalog – for quick and easy setup.
