

Company portrait

B.E.G. Brück Electronic GmbH

Since 40 years, the family company founded in 1975 with its headquarters in Lindlar (near Cologne) stands for quality and innovation with customer satisfaction at its heart.

The foundation stone of the products within the comprehensive range was the development and production of emergency lights. Shortly thereafter the production of emergency lighting systems followed.

B.E.G. was one of the first companies in Germany to commence the production of motion detectors and automatic lights in 1986. Since then, B.E.G. has produced several generations of motion detectors mainly for outdoor use on buildings that help increase security. The growth in automated systems for buildings and the resulting increase in the demand for intelligent control led to an expansion in our range of daylight- and presence-dependent occupancy detection. The cost reduction through energy saving and the protection of the environment plus the additional comfort factor are strong arguments for the use of occupancy detectors.

In 2007, the current distribution and logistics centre with adjoining production and development facilities started operation in Lindlar. In 2014, the new administration building opened next door to the production and distribution centre. Of course all B.E.G. facilities have their building technology supplied from the company's own range. All rooms and routes in the administration building are equipped with KNX occupancy detectors. Control of DALI lights, occupancy detectors, blinds and light switches takes place through the KNX-RCT room controller, developed in-house.

B.E.G. operates a continually-growing number of branches and agencies in many countries worldwide.

The B.E.G. product range is divided into six product lines: LUXOMAT®, LUXOMATIC®, LUXOMAT® net, SAFETYLUX®, CHRONOLUX and B.E.G. SMARTHOMÉ®. B.E.G. offers customers a wide product range, individual solutions, outstanding quality and personal service.
